

Routing

```
const routes: Routes = [
  {
    path: '',
    redirectTo: 'projectlist',
    pathMatch: 'full'
  },
  {
    path: 'projectlist',
    component: ProjectslistComponent
  },
  {
    path: 'project',
    component: ProjectComponent
  }
];
```

Parent component

```
constructor(private _router: Router) { }
// pass data to another component
getProject(project) {
  console.log(project);
  this._router.navigate(['project', {name: project.name, id:
project.id, desc:project.desc }]);
}
```

Child Component

```
constructor(private acr: ActivatedRoute) { }
ngOnInit(): void {
  this.projectName =
this.acr.snapshot.paramMap.get('name');
}
```

```
this.projectId = this.acr.snapshot.paramMap.get('id');  
let desc = this.acr.snapshot.paramMap.get('desc');  
console.log('this.projectName', this.projectName);  
}
```
